REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

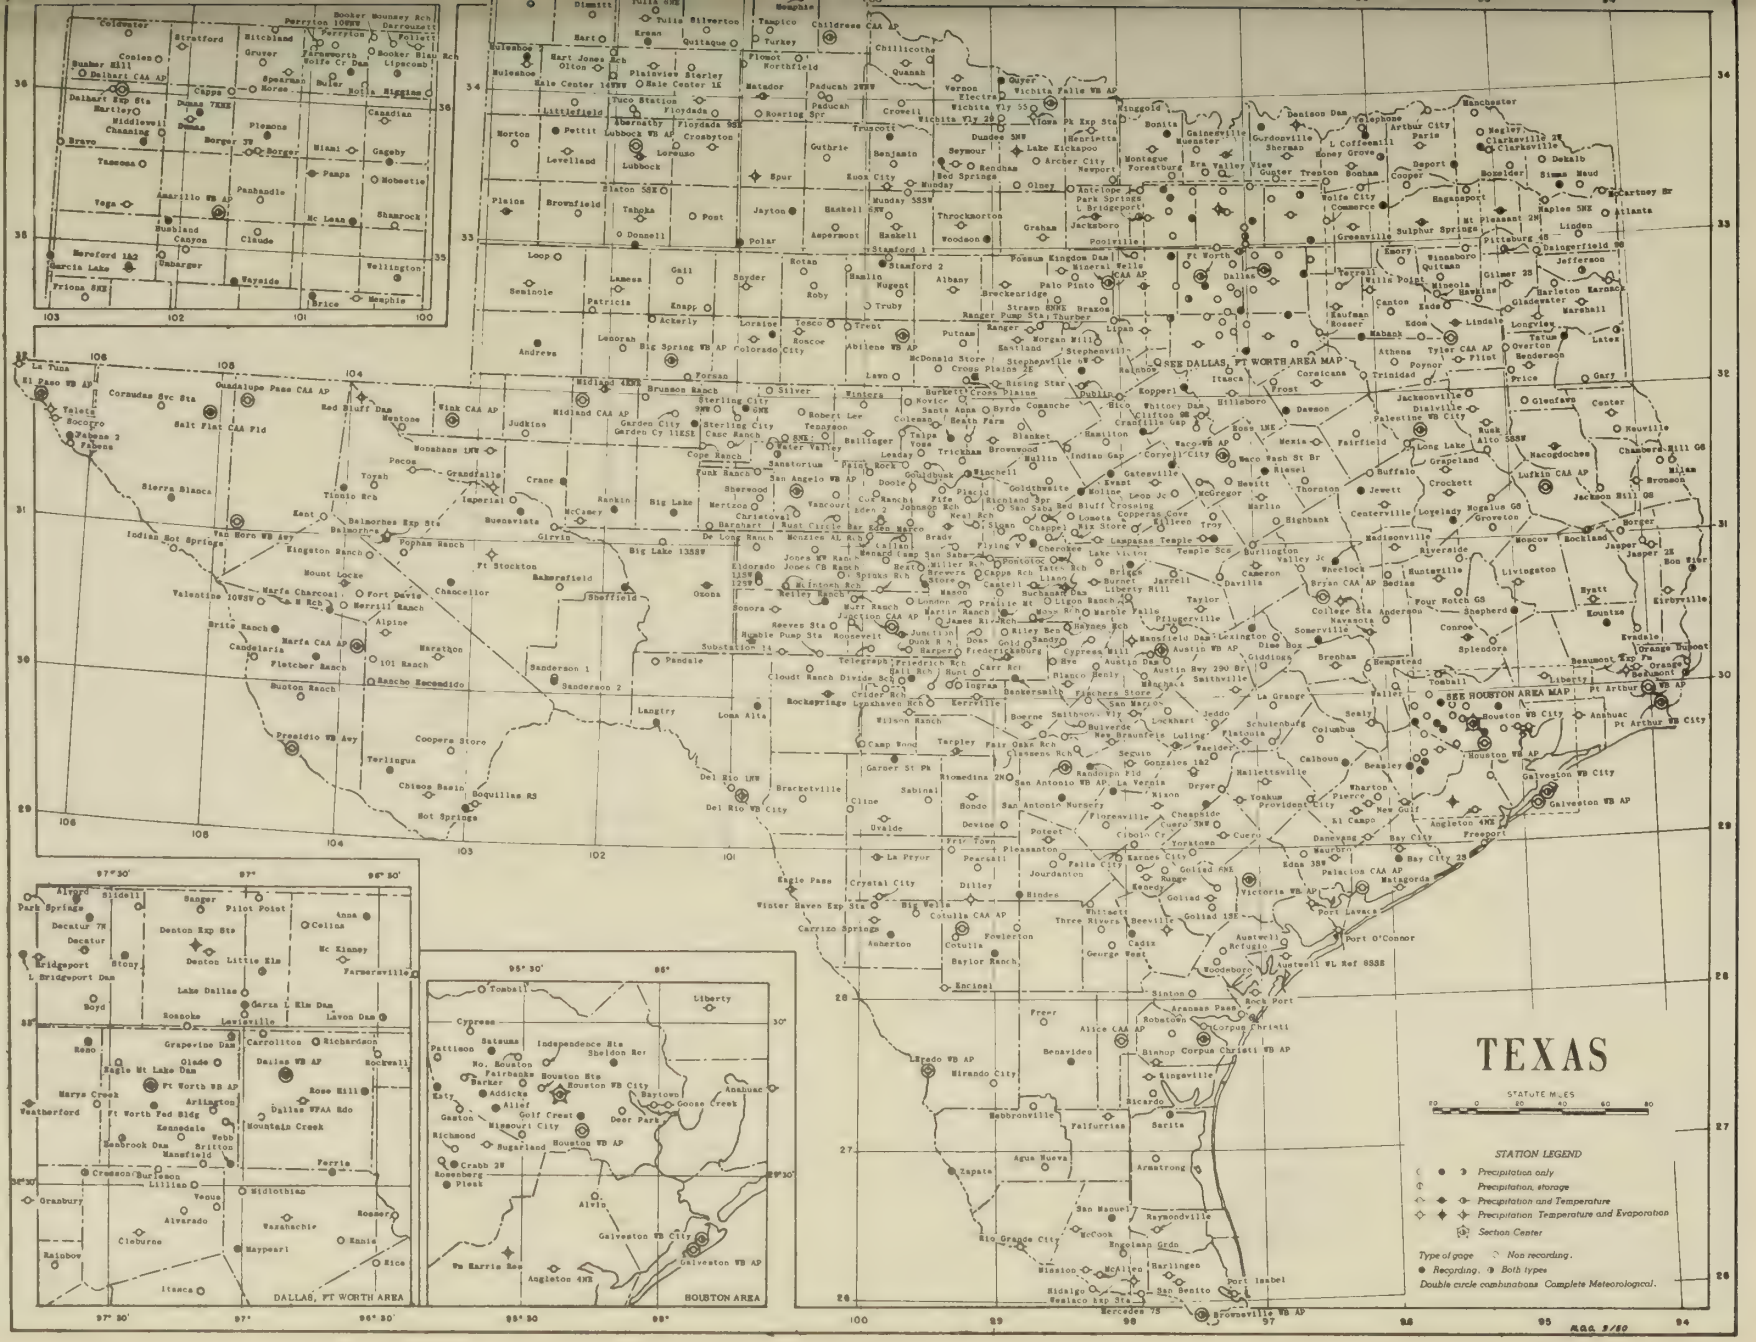
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

MAY 1951

Volume LVI No. 5

KANSAS CITY: 1951

TEXAS - MAY 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during May averaged above normal in the northwestern and extreme western portions and near the middle coast, and near normal elsewhere. Rainfall averaged considerably above normal in the middle Coastal Plains and the Panhandle, slightly above normal in the South Plains and extreme north portion of the State, and was generally deficient elsewhere.

The month started with cool temperatures. The lowest temperature in the State was 29° at Mount Locke on the 1st; however, most stations reported their monthly minima on the 2nd. Light showers occurred in the extreme south and effective rains fell in the central and eastern portions during the first week. The greatest precipitation in 24 hours was 12.20 inches at Matagorda on the 7th. Cool temperatures at the beginning of the second week gave way to normal or slightly above normal May readings. Showers occurred in many sections during the second week of the month. From the 13th to the 19th, flood-producing rains occurred in the Panhandle and the northwest quarter. Minor flooding occurred in the Plainview area from heavy rains over Running Water Creek, normally a dry tributary to the Brazos River. Rains totaling as much as ten inches fell in that area from the 15th to the 17th. Minor flooding also occurred along the South Canadian River at Canadian, Texas, from the heavy rains in that basin. Panhandle, Texas had 11.93 inches from the 14th to the 18th. Effective rains also occurred along the eastward edge of the Edwards Plateau. On the 15th, unofficial rainfall amounts of 19 inches were reported in the D'Hanis area. This area is in the Nueces watershed. Additional showers occurred in many areas the balance of the month. Temperatures continued to rise with most stations recording their monthly maxima on the 29th or 30th. The highest temperature in the State was 114° at Presidio on the 28th. The greatest monthly precipitation was 13.65 inches at Matagorda.

Prospects for the 1951 cotton and grain sorghum crops in the northwest were materially improved by the drenching rains. Growing crops and pasture grass responded very rapidly to the warm humid weather with soil moisture at near saturation. Additional rain is still needed in the Coastal Bend and the San Angelo areas. Wet soil stopped field work in practically all areas except some extreme southern counties and in the northeast.

LOCAL STORMS

On the 9th at Iowa Park and Wichita Falls in Wichita County, a tornado, accompanied by hail, left $200,000 damage in the Iowa Park area alone. Estimate of the complete storm damage is impossible. On the 15th, a tornado occurred at Flagg, Castro County, demolishing outbuildings, barns, and windmills. On the 18th at Olney, Archer County, a tornado damaged 150 homes, with damage estimated at $1,500,000. At Abilene, Taylor County, on the 24th, a hailstorm left $800,000 property damage and $25,000 crop damage. The storms covered 25 square miles in the City of Abilene. Also, on the 24th at Rochester, Haskell County, a tornado and hailstorm destroyed a laborer's shack; lightning burned a farm home; one death was attributed to lightning; high water filled cellars and entered homes and businesses. No estimate of damage is available. On the 31st at Borger, Hutchinson County, a tornado took the porch off 2 homes. A 3-car garage was demolished and an adjoining garage damaged. --CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimati Network stations were presented in bulletins (Hydrologic Bulletins) whic were issued monthly for each of 8 drainage areas embracing the entire Unite States, but since the Network was established to meet the internal require ments of the Federal agencies referred to above, no provision was made fo public dissemination of the data, distribution being limited to cooperatin agencies and to certain public repositories. A list of locations where ref erence copies of the Hydrologic Bulletin Series are available for inspectio may be obtained upon application to Chief, U. S. Weather Bureau, Washingto 25, D. C.

Many other records published in this bulletin have been made available throug the cooperation of various public offices, private agencies, and individual as listed in the Station Index.

This issue contains additional precipitation data for the storm of May 15-17, 1951 on Pages 138 and 139.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS

JUNE 1951
Volume LVI No. 6

KANSAS CITY: 1951

TEXAS - JUNE 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during June averaged below normal along the Red River and over the central portion o the State, but were mostly normal to above elsewhere, much above in the extreme western portion an near the middle coast. Rainfall was below normal along the Rio Grande and upper coast and in th east-central portion of the State, but generally above normal elsewhere over the State.

The month began warm and sunny but cooler air moved downstate from the 2nd to the 4th accompanied b thundershowers. The lowest temperature in the State was 41° at Dalhart CAA Station on the 2nd; how ever, most stations recorded their monthly minima on the 3rd and 4th. Minor flooding occurred alon the Guadalupe River near Gonzales, in the northern part of San Antonio on the San Antonio River, alon the Sulphur, Sabine and Upper Trinity, due to the heavy rains that occurred from the 2nd to the 4th Exceptionally heavy rain occurred over the northern part of San Antonio, apparently with the stor centered over the Airport where 5.68 inches occurred from 5:00 a.m. to 8:00 a.m. All the underpasse on the north side of the city were flooded and considerable damage resulted to roads, streets an bridges in that area. The second week of the month began with showers but hot daytime temperatures Showers were general again near the end of the second week. Fair weather and high temperatures gen erally prevailed over the State during the balance of the month. The highest temperature in th State was 116° at Presidio on the 20th although most stations reported their monthly maxima on th 17th or 18th. The greatest monthly precipitation was 12.92 inches at Honey Grove.

Surface soils were dry over much of the State and subsoil moisture was being rapidly depleted. Cotto made excellent development over most of the State but feed crops and pasture growth, particularly i coastal and southeastern areas, was slowing down as moisture reserves declined. Wheat harvest wa under way in the northern counties of the High Plains and was nearing completion in central Hig Plains counties. Rain was needed in Coastal Bend, upper coastal, central and western counties. Sup plies of commercial vegetables were plentiful in all local markets. Range and pasture feed supplie were generally abundant but new growth was slowing down over most of the southern half of the State

LOCAL STORMS

On the 6th tornadoes occurred at Amarillo, Borger, White Deer, Pampa and Childress, leaving propert damage in excess of $1,500,000. Property damage was particularly heavy at White Deer where 12 per sons were injured. Also on the 6th, hail damaged roofs, autos, windows, and neon signs at Wichit Falls, the damage estimated at $1,000,000. On the 9th, hailstorms occurred at Pioneer, Eastlan County, Coleman and Eastland, with property damage exceeding $200,000. On the 10th, hail and win storms occurred at Lubbock, Rotan, Merkel and Abilene. Crop damage at Rotan amounted to $50,000 while property damage at Abilene was estimated at $1,500,000. At Abilene trees were uprooted and on freight car derailed when wind gusts reached 120 mph. On the 11th wind and hail storms occurred a Brady, Canyon, Quitaque, Turkey and Paducah, with damage in excess of $100,000. Hailstones as larg as baseballs were reported at Canyon and Quitaque. Minor hailstorms occurred at Hillsboro on th 12th and at Lubbock on the 13th. On the 15th a wind and hail storm occurred at Colorado City, Mitchel County, and a tornado caused $180,000 property damage at Merkel, Taylor County. On the 16th, a tor nado left property damage of $12,000 at Joshua, Johnson County. On the 20th heavy hail originatin near Griggs, Oklahoma, passed southeastward to Gruver, Hansford County. The amount of damage was no estimated.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimat Network stations were presented in bulletins (Hydrologic Bulletins) whi were issued monthly for each of 8 drainage areas embracing the entire Unit States, but since the Network was established to meet the internal requir ments of the Federal agencies referred to above, no provision was made f public dissemination of the data, distribution being limited to cooperati agencies and to certain public repositories. A list of locations where re erence copies of the Hydrologic Bulletin Series are available for inspecti may be obtained upon application to Chief, U. S. Weather Bureau, Washingt 25, D. C.

Many other records published in this bulletin have been made available throu the cooperation of various public offices, private agencies, and individua as listed in the Station Index.

REFERENCE NOTES

four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers hin a state.

ures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

ervation times given in the Station Index are in local standard time.

ayed data and corrections will be carried only in the June and December issues of this bulletin.

thly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

tions appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

ess otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in es. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless other- e shown by footnote following Table 6.

et and hail were included in snowfall averages in Table 1, beginning with July 1948.

unts in Table 4 are from recording gages. Traces are not shown.

unts in Table 3 are from non-recording gages, unless otherwise indicated.

a in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

w on ground in Table 7, is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

scription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders uld be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

JULY 1951
Volume LVI No. 7

KANSAS CITY: 1951

TEXAS - JULY 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

July was unusually warm with average temperatures considerably above normal over most of the state. Precipitation was slightly above normal in the El Paso area, the upper Red River Valley, portions of the Panhandle, and along the immediate upper coast, but was deficient elsewhere, extending the prolonged drought over most of the state.

Cool air moved into the Panhandle on the 1st, accompanied with thundershowers, which became general over the northern third of the state for the first few days of the month. The greatest amount of precipitation in 24 hours was 4.80 inches at Hale Center (14 WNW) on the 2nd. The lowest temperature in the state was 47° at Olton on the 2nd, when most stations recorded their monthly minima. Temperatures soon rose to typical mid-summer levels, with most of the state having afternoon readings exceeding 100°. The highest temperature in the state was 112° at Pecos on the 7th, although most stations recorded their monthly maxima from the 19th to the 21st. The balance of the month was hot and dry, except for isolated showers, some heavy. The showers were too scattered to relieve the general prolonged drought. The greatest monthly precipitation was 7.65 inches at Port Arthur.

Growing crops in northern and some northwestern counties were benefitted by showers early in the month. These showers delayed field work for a day or two, then farmers were back in the fields completing planting operations as well as cultivating and chopping growing crops. In sharp contrast drying soils over the southern two-thirds of the state caused deterioration to feed crops, cotton and pastures. Soil moisture was rapidly dissipated by the hot dry weather and rainfall is badly needed except in north Texas and in the northern High Plains. Open weather favored continued harvest of good quality hay. Combining of wheat was being rushed to completion in the northern High Plains. Cotton deteriorated and was opening prematurely in central and south Texas. Harvest was active in the Lower Valley and was under way in the Coastal Bend. Pastures and ranges were drying out rapidly in all except the northern third of the state.

LOCAL STORMS

On the 2nd a tornado and hail storm demolished a grain elevator at Olton, Lamb County, and unroofed some homes. The hail ranged from light to heavy damage, and destroyed about 500 acres of cotton. On the 27th a windstorm at Frost, Navarro County, destroyed two small frame buildings valued at $2,000. CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimati Network stations were presented in bulletins (Hydrologic Bulletins) whic were issued monthly for each of 8 drainage areas embracing the entire Unite States, but since the Network was established to meet the internal require ments of the Federal agencies referred to above, no provision was made fc public dissemination of the data, distribution being limited to cooperatir agencies and to certain public repositories. A list of locations where re erence copies of the Hydrologic Bulletin Series are available for inspectic may be obtained upon application to Chief, U. S. Weather Bureau, Washingtc 25, D. C.

Many other records published in this bulletin have been made available throu the cooperation of various public offices, private agencies, and individual as listed in the Station Index.

a Evaporation measured in sunken pan of 72 inch diameter. b Evaporation measured in sunken pan of 54 inch diameter.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 9-13-51 -- 1825

TEXAS

AUGUST 1951
Volume LVI No. 8

KANSAS CITY: 1951

TEXAS - AUGUST 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

August was unusually hot and dry over most of the State. It was the hottest August of record over the eastern half of the State and rated among the hottest of record over the western half. The extended drought continued over practically all portions of the State except the Brownsville area where heavy rains fell on the 22nd as a result of a hurricane which entered the Mexican coast near Tampico.

The month started hot and dry except for isolated showers in favored areas. Most stations recorded their monthly maxima from the 4th to the 8th. The highest temperature in the State was 116° at Henrietta on the 6th. A mild cold front moved into the Panhandle on the 9th, bringing somewhat lower temperatures as the front moved across the State. Most stations recorded their lowest temperatures from the 11th to the 13th. Warmer air from the Gulf prevailed from the 14th to the 18th. Another cold front entered the Panhandle on the 21st accompanied by thundershowers which extended southward as far as the Wink area. The lowest temperature in the State was 53° at Midland (4 ENE) on the 22nd. The greatest precipitation in 24 hours was 4.39 inches at Brownsville on the 22nd. This heavy rain was the result of a hurricane entering the Mexican coast near Tampico. The heavy rains did not extend over the rest of the Lower Valley. The balance of the month had temperatures near late August normals. The greatest monthly precipitation was 6.11 inches at Brownsville. The showers during the month were too scattered to relieve the general prolonged drought.

Cotton, peanuts, feed crops and pastures deteriorated further as the serious drought and searing 100 to 110° temperatures continued over most of the State. Scattered local showers gave temporary relief in favored north and northwest areas but general rains were needed in all areas. Dry range feed reserves were being steadily consumed over the southern two-thirds of the State and supplemental feeding continued to be stepped up.

LOCAL STORMS

On the 10th a wind and hail storm destroyed about 10,000-12,000 acres of cotton about 21 miles west of Lubbock in Hockley County. Hail was reported as large as hen eggs and as deep as three feet in some places. Wind destroyed an empty warehouse. Crop damage was estimated at $1,500,000. The amount of wind damage is unknown.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimati Network stations were presented in bulletins (Hydrologic Bulletins) whic were issued monthly for each of 8 drainage areas embracing the entire Unite States, but since the Network was established to meet the internal require ments of the Federal agencies referred to above, no provision was made fo public dissemination of the data, distribution being limited to cooperatin agencies and to certain public repositories. A list of locations where ref erence copies of the Hydrologic Bulletin Series are available for inspectio may be obtained upon application to Chief, U. S. Weather Bureau, Washingto 25, D. C.

Many other records published in this bulletin have been made available throug the cooperation of various public offices, private agencies, and individual as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F. precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the Standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- \- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- 6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall
- M One or more days of record missing; see Table 5 for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 10-12-51 -- 1785

CLIMATOLOGICAL DATA

TEXAS

SEPTEMBER 1951
Volume LVI No. 9

NOTE: Beginning with the October 1951 issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for processing and publication of these data.

KANSAS CITY: 1951

TEXAS - SEPTEMBER 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during September averaged near normal near the extreme upper coast and in th upper Red River Valley, but were above normal elsewhere with unusually high temperature for the season in some western districts. Dry weather continued over most western district but beneficial rains occurred in the eastern part of the State with excessive amounts o rain in the extreme southern portion of the State.

The month began extremely hot and dry, but was characterized by frequent invasions of cool polar air, which were accompanied by widespread thundershowers. Every few days the pola air was replaced by tropical air from the Gulf. This resulted in heavy rain generall from the 6th to the 15th and also in heavy rain in the eastern half of the State from th 21st to the 28th. Most stations recorded their highest temperature for the month on th 1st or 2nd. The highest temperature in the State was 112° at Henrietta on the 1st. Mos stations recorded their lowest temperature for the month from the 16th to the 18th. Th lowest temperature for the State was 34° at Dalhart Experiment Station on the 16th. Th greatest 24-hour precipitation was 13.21 inches at Alice on the 13th. The greatest monthl precipitation was 18.88 inches at Rockport.

Moisture conditions were much improved by generally adequate to excessive rainfall in easter and southern areas that had been experiencing serious drought conditions. Relief was es pecially effective in south central and extreme southern counties, including the Coasta Band area where rainfall has been spare for over a year. Only scattered light rains fel in most of the western half of the State. Wheat seeding was active in High Plains countie and some early seeded acreage was up to a fair stand. Very little field work was accon plished in most fall and winter commercial vegetable areas, as additional widespread rain in the Coastal Bend and Laredo sections and in scattered areas of the Lower Valley prevente planting and soil preparation.

STORMS

On the 3rd a windstorm damaged one house and barn and some utility poles at Putnam, Calla han County. The amount of damage was estimated at $1500.

FLOODS

Heavy rain on the 13th and 14th caused severe flooding of Alice and Falfurrias and othe towns in counties of Duval, Jim Wells, Nueces, and Kleberg. Several thousand acres of lan were flooded with extensive property damage estimated over $1,000,000. Two lives were los and over 3,000 persons were left homeless. Minor flooding occurred in the Nueces Rive watershed and in the lower Rio Grande Valley from heavy rains between the 12th and 16th Unofficial amounts of precipitation in the flooded area are included in a special tabul tion in this issue.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbe within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missin or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

OCTOBER 1951
Volume LVI No. 10

NOTE: Beginning with the October 1951 issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for processing and publication of these data.

KANSAS CITY: 1951

TEXAS - OCTOBER 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during October averaged near normal in the South Plains and in the upper Re River Valley, but were considerably above normal elsewhere with some record high tempera tures for the season in scattered localities. Precipitation was near normal in a fe widely scattered localities, but in general was considerably below normal over the State

The month began extremely hot with only light scattered showers during the first week. O the 3rd, Fort Worth had a record high temperature of 106°, which also occurred at Hic and Possum Kingdom Dam, and was the highest temperature in the State. Most stations re corded their highest temperatures during the first four days. Polar air entered the Pan handle on the 5th, bringing the lowest temperature for the month to most stations on th 8th and 9th. The second week was characterized by warm, sunny days and cool nights Another surge of polar air entered the State on the 16th and extended to the Gulf by th 20th, accompanied by widely scattered light showers. After the passage of a low pressur trough, a sharp change to cooler air began in the Panhandle on the 22nd, which brough the coldest temperature for the month of 27° at Dalhart on the 23rd. All sections of th State had some rain during the fourth week. The greatest precipitation in 24 hours wa 5.80 inches at Brackettville, which accompanied a cold front on the 28th. Another surg of polar air brought 27° again to Dalhart on the 31st. The greatest monthly precipitatio was 7.02 inches at Kaufman.

Texas farmers again made full use of available labor and machinery to push harvest o mature crops as open weather continued over much of the State for the third consecutiv week. Wheat, oats, winter legumes, and vegetable crop prospects were materially improve by light to heavy rain over the State except in western counties. Generally, these rain fell slowly and practically all was absorbed by the dry soil. Additional moisture wa still needed, however, over much of the State.

No severe storms were reported in the State during the month.--CBC

"Stations not followed by a Table Number in the Station Index are not published in Climatological Data beginning with October 1951."

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbe within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwi shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C

-	No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
+	And also on a later date or dates.
•	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orde should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintende of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

NOVEMBER 1951

Volume LVI No. 11

KANSAS CITY: 1952

TEXAS - NOVEMBER 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures averaged considerably below normal over the State. Lowest tempera tures for so early in the season were recorded at many stations during an earl cold spell on the 2nd and 3rd. In contrast, highest temperatures for so late i the fall were recorded at Austin and Houston from the 13th to the 15th. Rainfal was below normal throughout the State, accentuating droughty conditions which hav prevailed during the current year.

Scattered showers preceded the influx of cold air which brought the lowest tempera tures for so early in the season to many stations on the 2nd and 3rd. The lowes temperature for the State was 2° on the 2nd at Dalhart Experiment Station and a Stratford. The greatest 24-hour precipitation was 2.36 inches at Waller on th 5th. Heavy showers along the upper coast and in Northeast Texas resulted from th passage of a second cold front on the 5th and 6th. Fair weather prevailed from th 8th to the 10th, when the polar air began to be replaced with tropical air fro the Gulf of Mexico. Light scattered showers and unseasonable high temperature prevailed from the 11th to the 15th. The highest temperature for the State wa 95° at Falfurrias and Laredo on the 13th and at McCook on the 14th. A third col front entered the State on the 17th bringing the lowest temperatures for the mont to most stations on the 18th. Fair weather prevailed from the 16th to the 20th As tropical air again replaced the polar air, scattered showers, mostly light, oc curred almost daily for the balance of the month. The greatest monthly precipita tion was 4.81 inches at Boxelder.

Damage to tender vegetables from freezing temperatures and frosts on November 3 wa extensive in all areas. Harvest of cotton and sorghums in the northwest made goo progress in cool open weather and in south Texas supplies of commercial vegetable were increasing. Corn, sweet potato, peanut and rice harvest was practically com pleted in all areas. A light planting of flaxseed was started in the southe counties. Except in a few widely scattered eastern and northern areas, soakin rains were still urgently needed to replenish soil moisture and bring on smal grains, winter legumes and winter grass.

No severe storms were reported in the State during the month.--CBC

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

W.R.P.C., Kansas City, Mo. -- 1-16-52 -- 1785

TEXAS

DECEMBER 1951

Volume LVI No. 12

KANSAS CITY: 1952

TEXAS - DECEMBER 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

December 1951 was characterized by widely fluctuating temperatures. While a number of freezes extended to the upper coast section, temperatures averaged considerably above normal throughout the State and highest temperatures of record for December were recorded in some northern and northwestern portions of the State on the 30-31st. Precipitation was slightly above normal in the El Paso area but was considerably below normal in other portions of the State, accentuating the droughty conditions which have prevailed in most sections throughout the year.

Dry mild weather prevailed during the first few days. As tropical air moved in from the Gulf from the 4th to the 8th, unseasonably warm temperatures were recorded. The highest temperature in the State was 98° at Cotulla on the 6th. A sharp drop to cooler temperatures occurred on the 9th with the arrival of polar air in the State. This change was accompanied with light showers in eastern sections. From the 11th to the 17th, nearly all sections received some rain, although the amounts were generally light. A large number of stations had their lowest temperatures for the month on the 16th, although most stations had their monthly minimums on the 21st. The temperatures on the 16th were the coldest so far this winter. From the 18th to the 23rd, light to moderate rains occurred in the northeast quarter of the State, but elsewhere it was dry. Freezing temperatures extended on the 21st southward to near Corpus Christi. The lowest temperature in the State was -5° at Dalhart Experiment Station on the 21st. From the 24th to the end of the month, it was dry, except for light to moderate rain in the northeast quarter. The greatest 24 hours rain was 4.74 inches at Neuville on the 25th. Most stations recorded their highest temperatures for the month on the 30th or 31st. The greatest monthly precipitation was 9.62 inches at Neuville.

Small grain was just about holding its own as drought continued to plague practically the entire State. The only exception was in favored eastern counties where moisture was adequate and winter crops were making good progress. Wind and unseasonably warm temperatures during Christmas week further depleted the already scant surface moisture. Wheat in the northwest continued to develop slowly as light snow again provided some surface moisture. Damage to commercial vegetables from the cold spell of the 16th was light. Growth of all commercial vegetables was stimulated by high temperatures, and conditions were favorable for planting of spring crops in all early sections. In south Texas early-planted flax was generally up to a good stand, and conditions were favorable for the continuation of planting in that area. Most flax areas have sufficient moisture for crops to get a better start than in the past few years.

No severe storms were reported in the State during the month.--CBC

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of number within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F., precipitation and evaporation in inches, and wind movement i miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwis shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- // Gage is equipped with a windshield.
- B Adjusted to a full month.
- E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
- R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money order should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintenden of Documents, Government Printing Office, Washington 25, D. C.

CORRECTIONS

August 1950, Table 2, precipitation departure for the state should be -0.01.

Annual 1950, Table 2, August departure should be -0.01.

March 1951, Houston WB City, Table 2, total precipitation should be 3.91, departure .41, and greatest day 2.23.

Houston WB City, Table 3, 26th should be 2.23 and total 3.91.

April 1951, Conroe 6 E, Table 3, add .12 on 29th and change total to .95.

Conroe 6 E, Table 4, on 29th add the following: at 9a .05, 10a .05, 11a .02, and total .12.

Eden 2, Table 3, delete dashes 23rd through 30th and add * on 28th, 1.40 on 29th and total 2.75.

Eden 2, Table 4, delete dashes 23rd and 30th. Add stars 5p through total on 28th, stars 1a through 6a, 1.40 at 7a and total of 1.40 on 29th

Evant, Table 3, 29th should be .55, 30th .26 and total 2.13.

Evant, Table 4, on 29th add .16 at 2a, .21 at 3a, .08 at 4a, .06 at 5a, .04 at 6a, and total .55. On 30th delete entries 2a through 6a and add .18 at 11p, .08 at midnight and total .26.

Guyer, Table 3, 30th should be .82 and total 1.32.

Guyer, Table 4, on 30th delete entries 6a to 2p and add .48 at 7p, .30 at 8p, .01 at 9p, .01 at 10p .02 at 11p and total .82.

August 1951, Lubbock, Table 3, delete 1.90 on 21st; add 1.90 on 22nd.

Lubbock, Table 4, all hourly amounts published on the 21st should be shown on the 22nd.

Salt Flat CAA AP, Table 4, 1st and 31st days should show a "no record

September 1951, Crane, Table 3, delete dashes 23rd through total and add total 3.23.

Crane, Table 4, delete dashes on 23rd and 30th.

Muleshoe 2, Table 3, delete dashes on 10th through 15th and add total of .00.

Muleshoe 2, Table 4, delete all entries on 10th and 15th.

ANNUAL SUMMARY 1951

Volume LVI No. 13

KANSAS CITY: 1952

TEXAS - 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

The average temperature for the State for 1951 was 66.1° or 0.8° above normal. The highest temperature recorded during the year was 116° at Presidio on June 20th and at Henrietta on August 6th. The lowest temperature recorded during the year was 19° below zero at Dalhart on February 1st. The annual range of temperature within the State was 135°. The greatest monthly range of temperature was 114° in February although each month had wide fluctuations in temperature. The average amount of precipitation was 21.09 inches or 6.61 inches below normal. Precipitation averaged below normal in all major divisions of the State for the year as a whole, although above-normal precipitation occurred in March, May, June, and September. Attention is called to the changes made in August of the divisions of the State. Instead of three divisions, we now use eight divisions, which are indicated on the map showing the location of the substations. The greatest precipitation in the year was 53.85 inches at Neuville. The greatest amount in 24 hours was 13.21 inches at Alice on September 13th, although an unofficial measurement of 21 inches was made near Hebbronville during the same storm, which lasted from September 13th to the 16th. The least annual precipitation in the State was 3.32 inches at Salt Flat. The greatest deficiency occurred at Conroe, which had a departure of 22.22 inches less than normal precipitation. A serious drought prevailed over most of the State this year, which was accentuated by an accumulated deficiency, which was carried over from 1950.

The aggregate 1951 crop production in Texas was somewhat less than last year with only cotton, rice, and broomcorn showing greater production than in 1950. More than offsetting these increases were sharp reductions for corn, oats, barley, rye, flaxseed, grain sorghum, peanuts, sweet potatoes, and wheat production moderately lower than the poor 1950 crop. The total harvested acres of all crops was about 2 percent more than last year but 11 percent below the 1940-49 average. Adverse growing conditions included extremely low and damaging temperatures on February 1, drought throughout the season, searing July and August temperatures, and record low temperatures for the season on November 3rd. Wheat production was the lowest since 1935. Citrus production was virtually wiped out by the early February freeze. On the other hand, a record crop of rice was produced in 1951, which was 7 percent above the former record established last year. The cotton crop was more than one-third above the average, and is the largest crop since 1937, except the record crop in 1949. The estimated value of all crops in 1951 was 1.3 billion dollars.

SYNOPSIS BY MONTHS

JANUARY - Temperatures averaged below normal over the South Plains and in some southwestern areas, but averaged above normal elsewhere. A severe cold wave overspread the State between the 27th and 31st. This cold wave, which was accompanied by freezing rain, sleet, and some snow, set new records for extended freezing weather over southeastern, extreme southern and central areas where considerable losses of cattle and damage to vegetation, power lines, and poles occurred.

FEBRUARY - The ice storm of January 29th to February 4th extended from Tyler to Port Arthur, thence southwestward to Laredo. Extensive damage was done to trees, shrubs, and communication lines. Loss of electric power resulted in loss of heating facilities where thermostat controlled furnaces were depended upon. Heaviest damage was from Corpus Christi to Richmond and in the Tyler area. The ice storm of the 13th to the 15th extended from Eagle Pass northeastward to the Red River Valley. Although more extensive in area than the storm which started in January, less damage was experienced.

MARCH - Temperatures averaged below normal over the Panhandle and South Plains, but were mostly normal to above elsewhere. Beneficial rains occurred over the southern and extreme eastern portions of the State. Minor flooding occurred in the lower Sabine basin near the end of the month from heavy rains which fell over the middle and lower Sabine from the 26th to the 29th. A hailstorm at San Antonio on the 28th damaged crops to the extent of $10,000. Hailstones were generally the size of moth balls with the heaviest hail in the southwest portion of the city.

APRIL - Temperatures averaged slightly above normal in southwestern, west-central, and a few lower coast areas, but were mostly below normal elsewhere. Rainfall was deficient in all portions of the State except the El Paso area. At Palestine, on the 29th a hailstorm damaged crops and buildings. Hailstones were reported the size of hen eggs at Neches, Texas. Hail was piled 5 or 6 inches deep.

MAY - Temperatures averaged above normal in the northwestern and extreme western portions and near the middle coast, and near nommal elsewhere. Rainfall averaged considerably above normal in the middle Coastal Plains and the Panhandle, slightly above normal in the South Plains and extreme north portion of the State, and was generally deficient elsewhere. Minor flooding occurred in the Plainview area along Running Water Creek, also along the South Canadian River at Canadian. Numerous severe storms occurred.

JUNE - Temperatures averaged below normal along the Red River and over the central portion of the State, but were mostly normal or above elsewhere. Rainfall was below normal along the Rio Grande and upper coast and in the central portion of East Texas, but generally above normal elsewhere. Minor flooding occurred along the Guadalupe River near Gonzales, in the northern part of San Antonio on the San Antonio River, along the Sulphur, Sabine and Upper Trinity. Numerous severe storms occurred.

JULY - The month was unusually warm with average temperatures considerably above normal over most of the State. Precipitation was slightly above normal in the El Paso area, the upper Red River Valley, portions of the Panhandle, and along the immediate upper coast, but was deficient elsewhere.

AUGUST - It was the hottest August of record over the eastern half of the State and rated among the hottest on record over the western half. The extended drought continued over practically all portions, except the Brownsville area where heavy rains fell on the 22nd as a result of a hurricane which entered the Mexican coast near Tampico. On the 10th a wind and hail storm destroyed about $1,500,000 worth of cotton about 21 miles west of Lubbock. Hail was reported as large as hen eggs and three feet deep in some places.

SEPTEMBER - Temperatures averaged generally above normal with unusually high temperatures for the season in some western districts. Dry weather continued over most western districts but beneficial rains occurred in the eastern part of the State with excessive amounts of rain in the extreme southern portion of the State. Severe flooding occurred at Alice and Falfurrias and other towns in counties of Duval, Jim Wells, Nueces, and Kleberg; property damage was estimated at over $1,000,000, and over 3,000 persons were left homeless. Minor flooding occurred in the Nueces River watershed and in the lower Rio Grande Valley.

OCTOBER - Temperatures averaged near normal in the South Plains and in the upper Red River Valley, but were considerably above normal elsewhere with some record high temperatures for the season in scattered localities. Precipitation was near normal in a few widely scattered localities, but in general was considerably below normal over the State.

NOVEMBER - Temperatures averaged considerably below normal over the State. Lowest temperatures for so early in the season were recorded at many stations during an early cold spell on the 2nd and 3rd. In contrast, highest temperatures for so late in the fall were recorded at Austin and Houston from the 13th to the 15th. Rainfall was below normal throughout the State.

DECEMBER - The month was characterized by widely fluctuating temperatures. While a number of freezes extended to the upper coast section, temperatures averaged considerably above normal throughout the State and highest temperatures of record for December were recorded in some northern and northwestern portions of the State on the 30th-31st. Precipitation was slightly above normal in the El Paso area but was considerably below normal in other portions of the State, accentuating the droughty conditions which have prevailed in most sections throughout the year. --CBC

RELOCATIONS OR CHANGES IN EXPOSURE OF INSTRUMENTS

Beaumont Exp. Farm: Equipment moved 8 miles west on February 8.

Borger: Equipment moved 0.4 mile north on July 1.

Conlen 3 N: Rain gage moved 2.5 miles north on May 7.

Cooper: Rain gage moved 0.3 mile west on April 24.

Cross Plains #2: Rain gage moved 1.4 miles west-southwest on June 21.

Eastland: Equipment moved 2 blocks south and 3 blocks east on February 20.

El Campo: Equipment moved 1/4 mile west on January 11.

Eldorado 16 SW: Rain gage moved 5 miles west-southwest on August 30.

Friona: Rain gage moved 3/4 mile east on March 24.

Garden City 16 E: Rain gage moved 7 miles northeast on January 6.

Garza - Little Elm Dam: Equipment moved 4 1/2 miles east on March 26.

Gladewater: Equipment moved 1000 feet south on February 24.

Hondo: Equipment moved 2/3 mile west-southwest on May 26.

Jourdanton: Rain gage moved 1/4 mile east on May 19.

Marlin: Equipment moved 1/2 mile east-southeast on February 5.

McCartney Bridge: Rain gage moved 4 miles southwest on April 19.

McKinney: Equipment moved 1.1 miles west on April 26.

Ozona: Equipment moved 0.4 mile southeast on February 19.

Orange: Rain gage moved 2.1 miles northeast on June 14.

Pattison: Rain gage moved 0.6 mile north on September 12.

Plainview: Equipment moved 1 1/4 miles west on September 17.

Plains: Rain gages moved 60 feet west on August 17.

Poynor: Rain gage moved 1/4 mile northeast on February 21.

Rocksprings: Equipment moved 0.5 mile south-southwest on September 8.

Ross 2 NW: Rain gage moved 2 miles west on March 7.

Saxon 1 NE: Equipment moved 4.9 miles southeast on October 27.

Smithville: Equipment moved 1500 feet south on July 26.

Sterling City 10 N: Rain gage moved 5 miles northwest on January 1.

Stony: Rain gage moved 4 miles east of June 16.

Tampico: Rain gage moved 3 1/4 miles west-southwest on August 16.

Trinidad: Rain gage moved 2000 feet north on November 1.

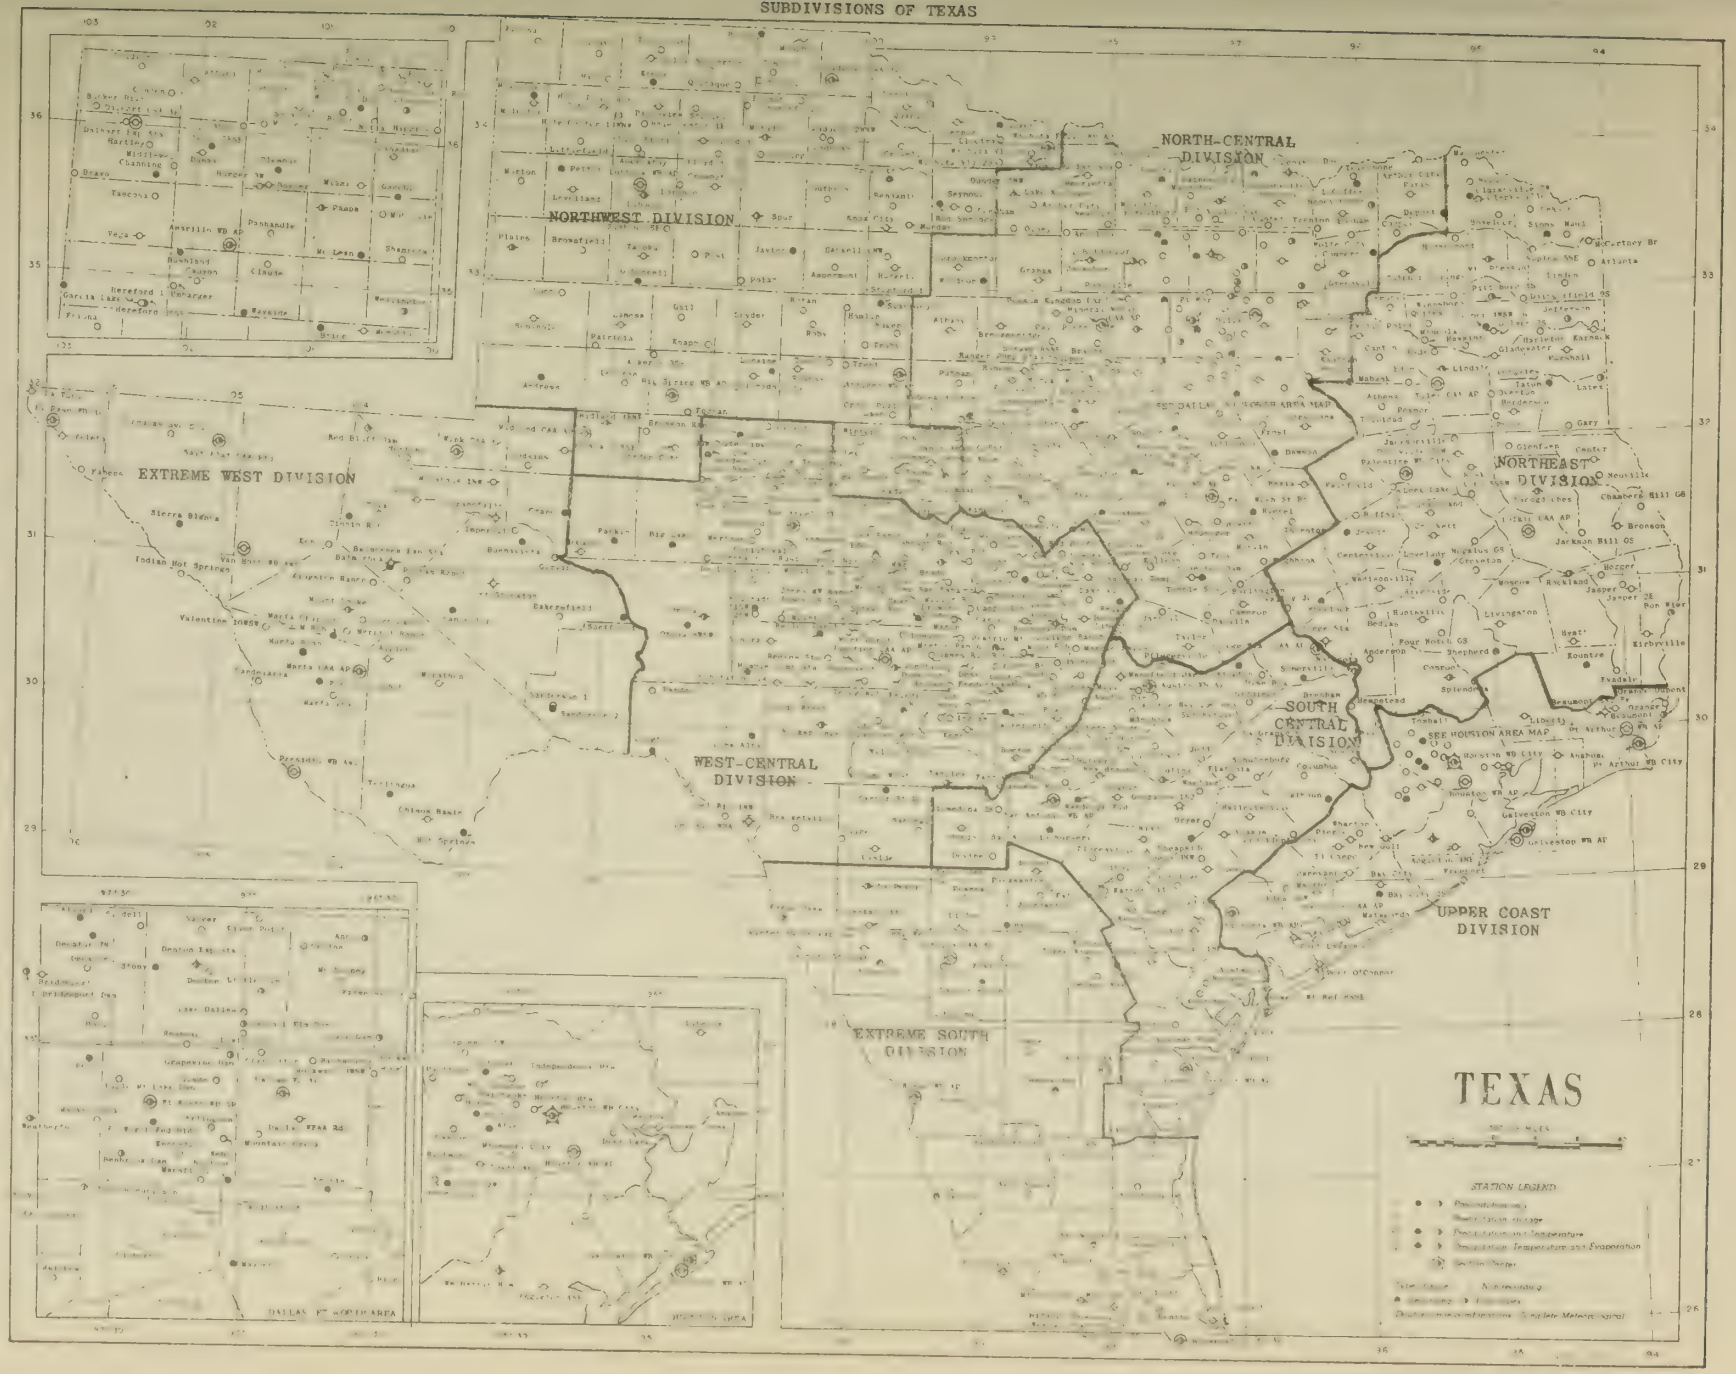
Water Valley 7 NE: Rain gage moved 1 1/4 miles southeast on January 3.

Winchell: Rain gage moved 1.5 miles east-southeast on June 22.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.



Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Water equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch of water equivalent to every 10 inches of new snowfall.
- M 1 to 9 days' record missing; see monthly Climatological Data for detailed daily record.
- R Station equipped with a recording gage only.
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.
